

How to attach Cell Shield

Clean phone surface or case for shield to adhere properly. Remove safety tape from the bottom of the shield to expose adhesive surface, then attach to phone. Certain surface textures may require additional adhesive.

Note: Manufacturer recommends product replacement after 2 yrs. (Cell Shield can be re-attached to another phone using additional adhesive)

iPhone: 4,4s,5, 6, 6s

Attach Shield on the front right corner or on the back of the phone

iPad: 2,3,4, Air

Attach Shield on the front right corner or on the back of the iPad

Galaxy: S2,S3,S4

Attach shield on back of phone, placing under camera

Blackberry:

Attach black shield on back of phone

HTC:

Attach shield on back of phone, placing under camera

Flip phone:

Align then attach black shield above the battery on back of phone

Cell Shield User's Guide

What is Cell Shield?

Cell shield is an innovative product that can protect it's users against potentially harmful effect of electromagnetic waves. Cell Shield is a composite of twenty different compounds that have the propensity to absorb potentially harmful electric and magnetic waves. These ceramics are able to render them harmless by converting them into shorter far infra-red rays, which are useful bionic energy. Throughout this conversion process, the ceramics molecular structure undergoes dynamic changes in order to continuously reproduce this benefit. This in turn reduces the impact of the electromagnetic waves and its adverse effect on it's users health.

Cell Phone Radiation Penetrates the Brain

When you use a cell phone, radiation emitted from the antenna is absorbed by your brain. Children's brains absorb more RF than adults'.

images from the study conducted by Dr. Om Gandhi, of the University of Utah, depicting radiation penetrating the skull. Dr. Gandhi showed radiation penetration of a 5-year old (75%), a 10 year old (50%), and an adult (25%).
